Meet • Support • Play

All you need is a few ingredients and materials:

- water
- shaving foam
- large tray
- stick
- food colouring

Mixing colours with shaving foam is an easy messy play activity for kids that's quick to set up and loads of fun to do! Fill the tray with shaving foam, add a splash of water and mix it up to make it extra foamy. Then add a few drops of food colouring - ideally just two of the primary colours (Either blue, red or yellow) so your child can experiment making secondary colours (orange, green or purple). And get mixing!

TOP TIP

Once finished, place a piece of paper on top to take a print of their creation
